LAKE OKEECHOBEE SYSTEM OPERATING MANUAL (LOSOM)

STATUS UPDATE

SOUTH FLORIDA ECOSYSTEM RESTORATION JOINT WG/SCG

MEETING

May 19, 2021 Web Meeting

U.S. Army Corps of Engineers
Jacksonville District

LOSOM GOALS AND OBJECTIVES

STUDY GOAL

Incorporate flexibility in Lake Okeechobee operations while balancing congressionally authorized project purposes.

STUDY OBJECTIVES

There are four study objectives, each with their own sub-objectives:

Objective 1:

Manage risk to public health and safety, life and property

1A: Dam safety

1B: Algal bloom risk in Lake Okeechobee

1C: Algal bloom risk in northern estuaries

Objective 2:

Continue to meet authorized purposes for navigation, recreation, and flood control

2A: Navigation

2B: Recreation

2C: Flood control

Objective 3:

Improve water supply performance

3A: Lake Okeechobee

Service Area

3B: Seminole Tribe of Florida

3C: Lower East Coast

Service Area

Objective 4:

Enhance ecology in Lake Okeechobee, northern estuaries and across the south Florida ecosystem.

4A: Lake Okeechobee

4B: Caloosahatchee

Estuary

4C: St. Lucie Estuary

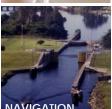

4D: South Florida

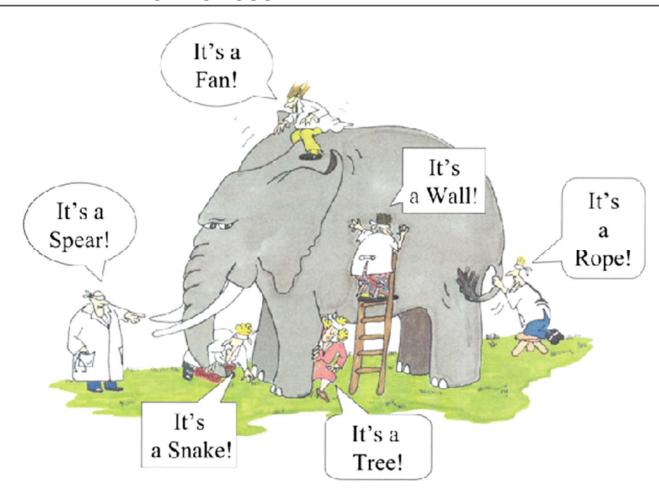

BALANCE

WHAT HAVE WE LEARNED DURING LOSOM

(2)

DEVELOPMENT OF CONCEPTUAL **PLANS**

EVALUATING CONCEPTUAL **PLANS**

3

ITERATION 1 ANALYSIS

BALANCED ARRAY OF LAKE SCHEDULES (ITERATION 2)

RECOMMENDED SCHEDULE (ITERATION 3)

Preferred Alternative mid-July

4

ACTIVITIES

- Develop conceptual lake schedules to maximize the performance of individual objectives
- Simulate ~ 120k variations of conceptual schedules using a subset of sensitive and representative criteria to guide the analysis
- Apply dam safety, WOBEL test, and Pareto-sorting (27K schedules remain)

- Identify ranges of performances and relationships between performance measures
- Evaluation to understand how each plan operates to achieve benefits
- Recommend representative plans that prioritize performance for each sub objective for Iteration 1

- Iteration 1 schedules prioritize performance of a single objective
- Larger suite of performance metrics used for more detailed analysis of benefits, and effects
- Information gathering step to inform iteration 2

January 26 - May 7

- Lake schedules in this iteration will be balanced for project objectives
- Recombine/modify components of Iteration 1 alternatives and re-evaluate 27K schedules to create balanced alternatives
- Evaluate balanced alternatives to ID preferred lake schedule alternative

May 10 - July 23

RSM-BN & RSM-GI

- Optimize lake schedule
- Modify to increase schedule robustness and flexibility for incremental implementation

July 26 - September 24

RSM-BN & RSM-GL

MODELS USED IN ANALYSES:

RSM-BN = Regional Simulation Model - BASINS

RSM-GL = Regional Simulation Model - Glades LECSA

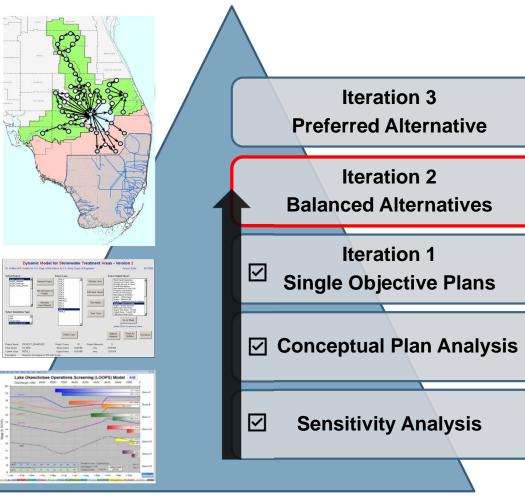

FEWER SCHEDULES/MORE DETAILED ANALYSI

LAKE OKEECHOBEE SYSTEM OPERATING MANUAL (LOSOM)

LOSOM MODELING PROCESS OVERVIEW

- ➤ **Goal:** Refine and optimize preferred alternative to ensure compatibility with future actions and develop operating criteria.
- Goal: Develop alternatives that represent different perspectives on balance and evaluate using full suite of models to define long term outcomes.
- Goal: Evaluate single objective plans using full suite of models to identify desired performance.
- Goal: Use Pareto analysis to identify top performing conceptual schedule for each LOSOM objective. Develop conceptual schedules and simulate using RSMBN to generate thousands of simulations.
- ➤ **Goal:** Use simplified models and data processing techniques to analyze a broad range of options and to identify ideas that warrant further in-depth analysis.

BRIDGE BETWEEN ITERATION 1 AND ITERATION 2

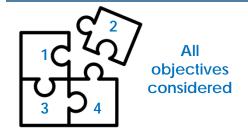

ITERATION 1

SINGLE OBJECTIVE **SCHEDULES**

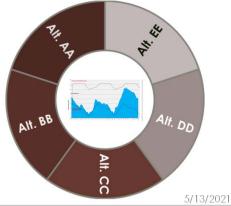

ITERATION 2 BALANCED ARRAY OF LAKE **SCHEDULES**

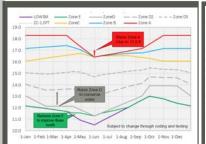

Balanced Alternative Lake Schedules

DIVERSITY OF BALANCED PLANS (FINAL ARRAY)

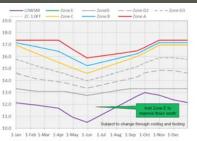

Alternative AA

Explores upper and lower lake stages to increase interim storage in lake to:

- Reduce lake releases to St. Lucie Estuary
- Enhance Everglades ecology by sending more water south with dry season focus
- Improve water supply
- Increase low and optimal flows to Caloosahatchee Estuary

Alternative BB

Improves water supply performance to pre-LORS08 as a priority objective and:

- Reduce algal bloom risk
- Increase low and optimal flows to Caloosahatchee Estuary
- Reduce lake releases to St. Lucie Estuary
- Enhancing Everglades ecology by providing more freshwater south.

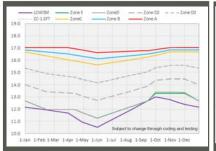

Alternative CC

Explores higher lake stages to increase interim storage in lake to:

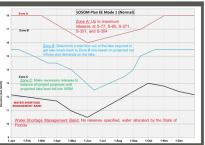

- Increase low and optimal flows and reduce extreme high flows to Caloosahatchee Estuary
- Reduce lake releases to St. Lucie Estuary
- **Enhance Everglades** ecology by providing more freshwater south
- Improve water supply performance

Alternative DD

Honors the perspective on balance that each of the LOSOM objectives should be incrementally improved over LORS08 performance

Alternative EE

Incorporates memory and flexibility by asking key questions at key times (Feb, May, Nov) define operational mode:

- Mode 1-Normal
- Mode 2- Conservation
- Mode 3-Wet
- Mode 4-Recovery

*Lake zones subject to change based on IMC testing broad ranges of parameter values to maximize performance

BALANCED ALTERNATIVE EE

MEMORY

Where have we been?

Where are we now?

Where are we going?

FLEXIBILITY

Incorporate <u>memory</u> into a schedule where we ask the *right* questions at the *right* time (call it a decision point)

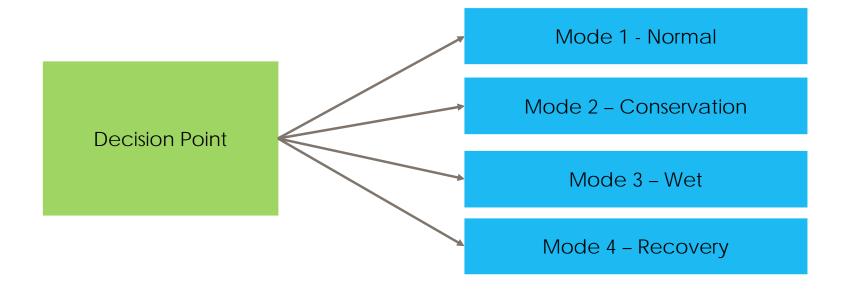

Incorporate <u>flexibility</u> into a schedule means primarily defining operations (modes) based on the outcome of key questions in addition to other tools

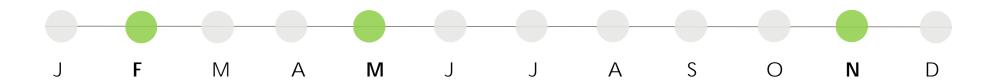

POC: Savannah Lacy 5/13/2021

KEY QUESTIONS AT KEY TIMES DEFINE YOUR OPERATIONAL MODE

POC: Savannah Lacy 5/13/2021

LOSOM ITERATION 2 MODELING PROCESS

Use Balanced Alternatives AA – EE as a framework

Provide guidance to modeling team on goals for performance improvements and identify guardrails for performance of other objectives

Collaborate with Interagency Modeling Center on coding of the framework of each alternative and testing for performance

Present Iteration 2 model results to PDT and explain process used to code and test Balanced Alternatives AA-EE

Evaluate Iteration 2 Balanced Alternatives with PDT

LOSOM SCHEDULE AND NEXT STEPS

ALTERNATIVE DOCUMENTATION PMP SCOPING FORMULATION EVALUATION & DECISION

OCT 2018 WE ARE HERE

OCT 2022

SCHEDULE LOOK AHEAD

MILESTONE	DATE
Scoping Meetings (complete)	February - March 2019
Plan Formulation & Performance Evaluation Finalized	June 2020
Evaluation of Alternative Lake Schedules	July 2020 – September 2021
Draft NEPA Document Release	January 2022
Final NEPA Document Release	July 2022
Record of Decision (ROD)	October 2022

MAY 2021

- PDT Meeting Balanced Alternative Array 7MAY21
- Iteration 2 Balanced Alternative Iterative Modeling
- Sub-team Discussions on Evaluation Process (as needed)

JUNE 2021

- PDT Meeting Iteration 2 Data TBD
- Evaluation of Balanced Lake Schedules
- Sub-team meetings to Support Evaluation

 PDT Meeting - Finalize Iteration 2 Evaluation TBD Selection of Preferred Lake Schedule Alternative

JULY 2021

Begin Iteration 3 Optimization
